TOP DRESS PASTURES FOR TOP GROWTH

If you haven't top-dressed pastures yet, there is still time to do the job, says John F. Shoulders, VPI Extension agronomist.

Top yielding pastures need adequate plant food. For orchard grass and ladino clover or tall fescue and ladino clover, use from 400 to 800 pounds per acre of 5-14-14, 2-12-12, or 5-10-10 fertilizer.

If a soil test shows the soil to be low in potash, use a 0-10-20, or a 3-9-18 analysis fertilizer at the same rate as above, the specialist advises.

A higher analysis fertilizer may be substituted at equivalent rates.

Orchard grass and legume pastures should be top-dressed with 300 to 500 pounds of a 0-14-14, 0-10-20, or an equivalent. In grass and white clover pastures where the stand is good, apply every third or fourth year one of the following: 700 - 1,000 pounds of 0-20-10, or 0-20-20; 500 to 700 pounds per acre of 0-10-20; 200 pounds of 0-14-14; 400 pounds per acre of 0-14-7.

If the stand of grasses and legumes is poor, top-dress with 500 pounds of 10-20-20 or 1,000 pounds of 5-10-10. Apply at the proper rate if a soil test shows the need for it.

Shoulders says, to get the most from fertilizer, be sure the pasture is limed. A pH of 6.0 is best for pasture land.
